

## Assembly & Installation Instructions for Snow Shield

### Equipment Needed:

- Pop Riveter
- Ladder
- Partner to hold while you rivet

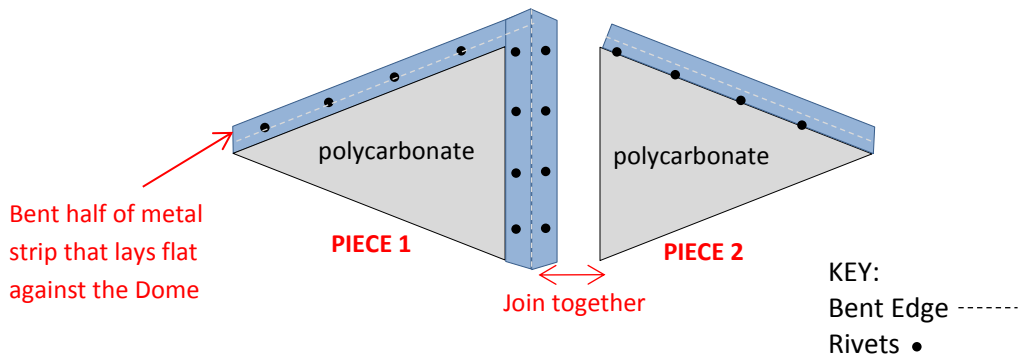

### Materials Included:

- 1 – Glazing with bent metal strip on two edges (dome side and top ridge)
- 1 – Glazing with bent metal strip on one edge (dome side)
- 4 – Pop Rivets
- 10 – Screws

### Assembly Instructions

1. Unpack the items and remove the protective plastic covering from both sides of the glazing
2. Orient the left side with the right side so that the glazing edges without the metal edge face you.  
*See Diagram below.*

3. On a flat surface, fit piece 1 with piece 2 along the metal strip with the bend in the center (ridge)
4. Tilt the Snow Shield towards you so that the ridge is directly in front of you.
5. Fit all four (4) rivets into the pre-drilled holes (on the right side of the ridge) and rivet them
6. Install on to the Dome (see Dome Installation Instructions below)

### Installation Instructions – Mounting the Snow Shield to your Dome

1. Position and center the Snow Shield on the pentagon struts above the door. Below is a view from the inside of the pentagon and the positioning of the Snow Shield

2. The panel should follow the lines of the struts on your dome.

3. Have someone hold the Snow Shield while you drill through each of the existing holes to the Dome on one side. Be sure to drill through the metal glazing strip (if applicable) to the wooden struts underneath to ensure the shield can withstand the weight of the snow and ice.
4. Insert screws into the newly drilled holes, securing the Snow Shield to the Dome.
5. Repeat steps 3 and 4 with the other side.

**Now your Growing Dome door and entryway will be clear of snow and safe from falling ice!**

**Please call Growing Spaces if you have any questions or comments.**
